

How to turn a sphere

1

Step by Step  
by Matt

2

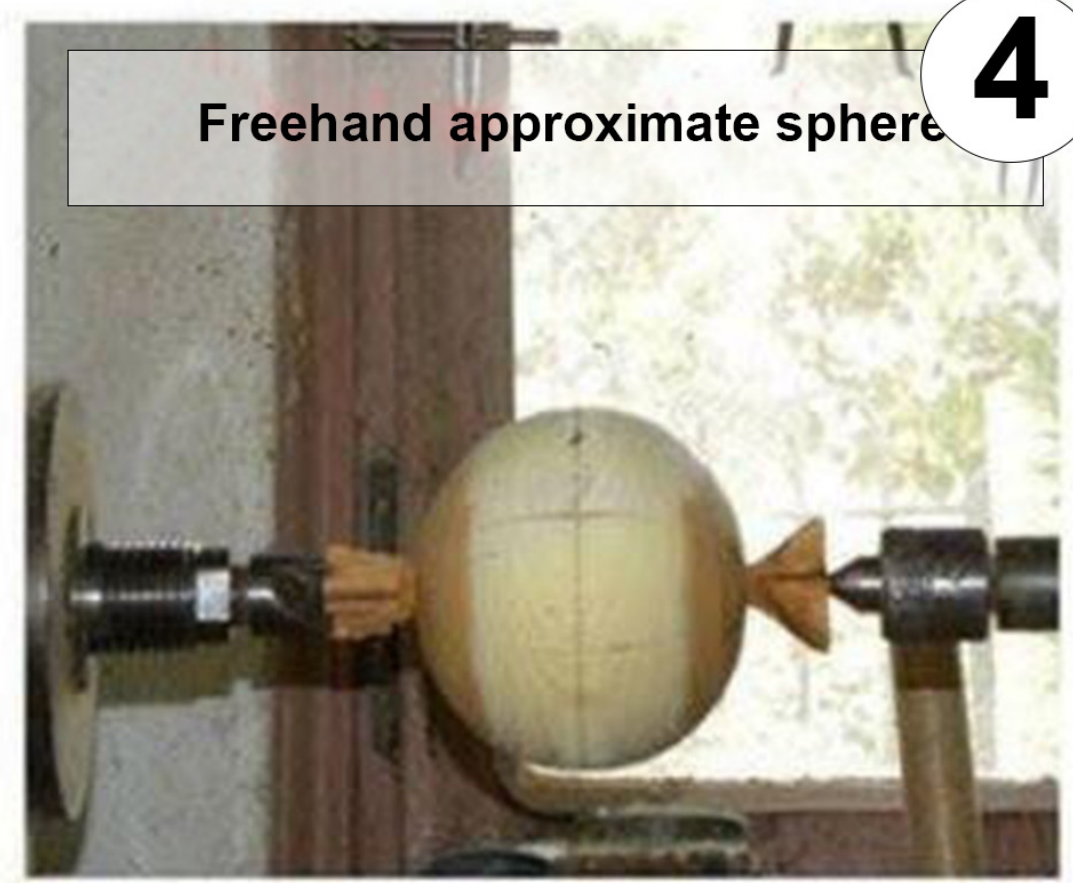

3

4

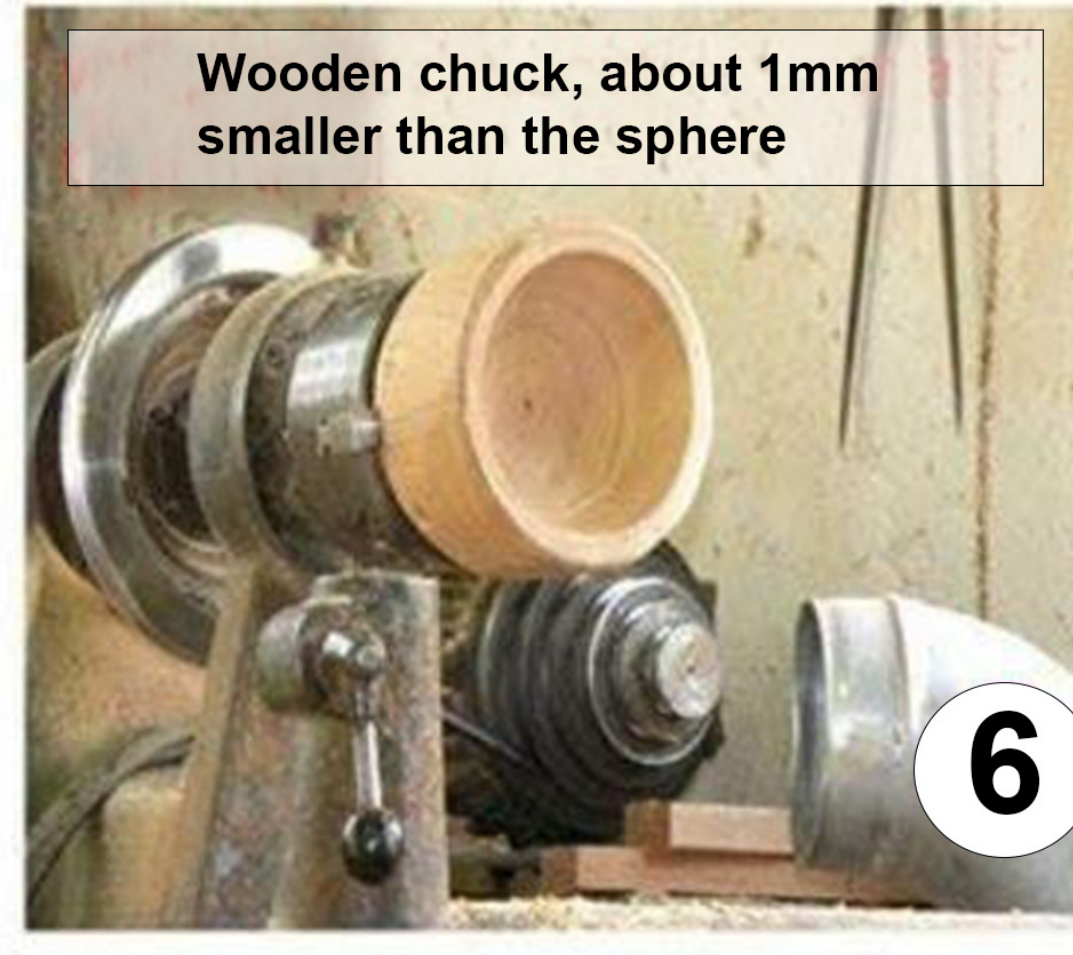

Freehand approximate sphere

5

Wooden chuck, about 1mm  
smaller than the sphere

Rotate the sphere by 45° and fix  
it in the chuck

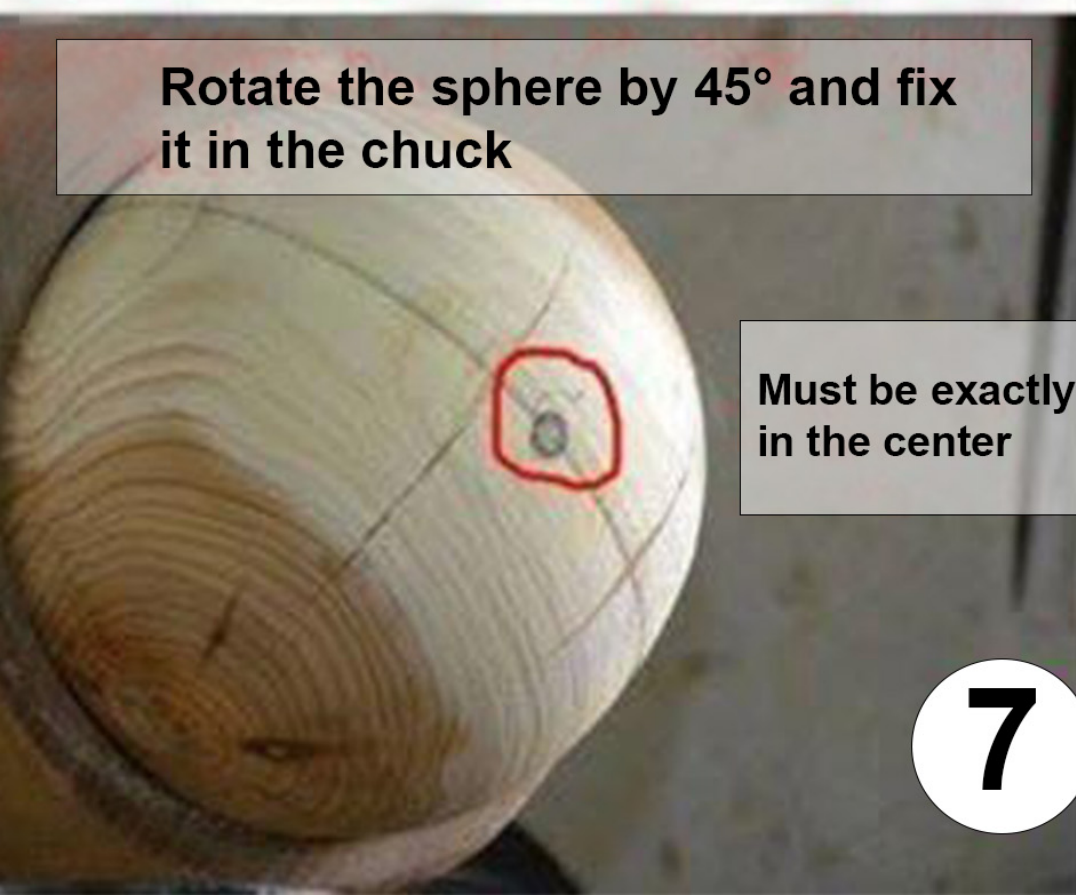

6

Eliminate all except the line

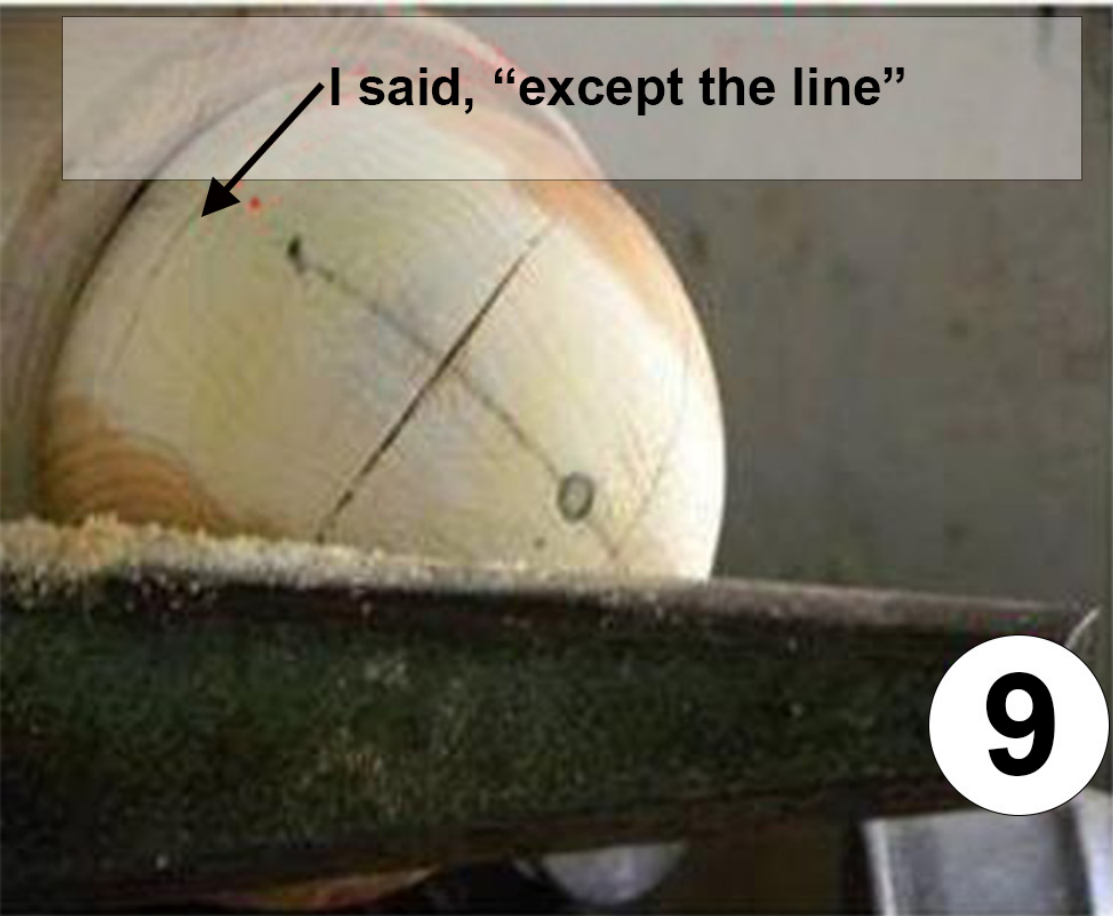

Must be exactly  
in the center

7

8

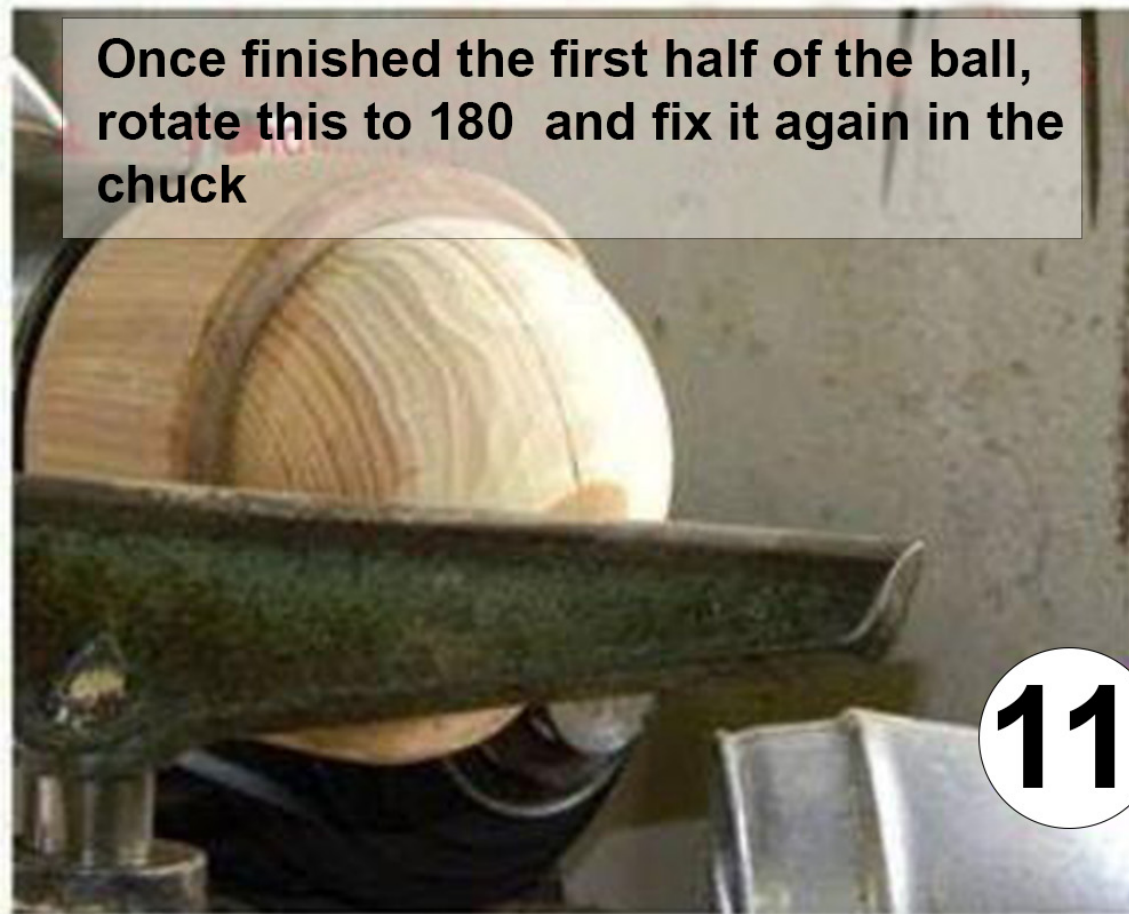

I said, "except the line"

9

To remove the ball and the chuck, tap with the hammer on the chuck board

10

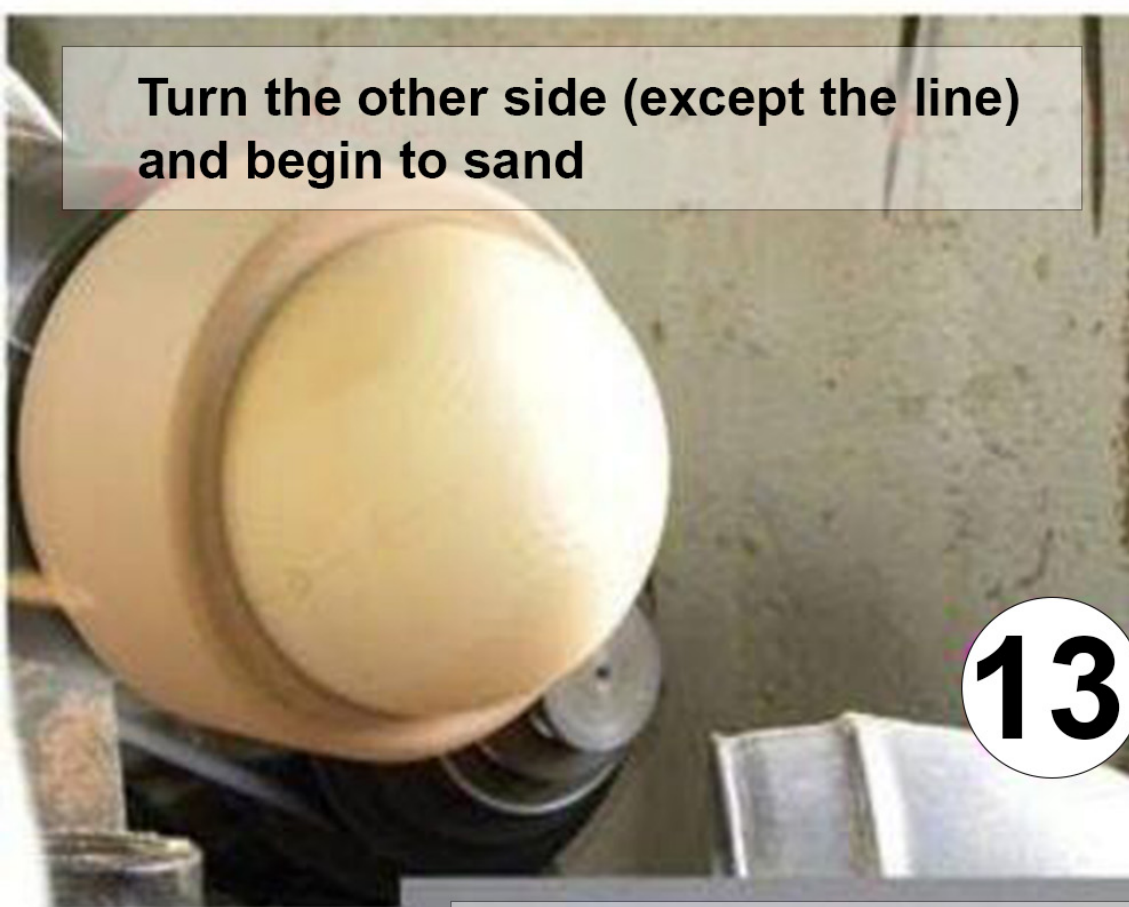

Once finished the first half of the ball, rotate this to 180 and fix it again in the chuck

11

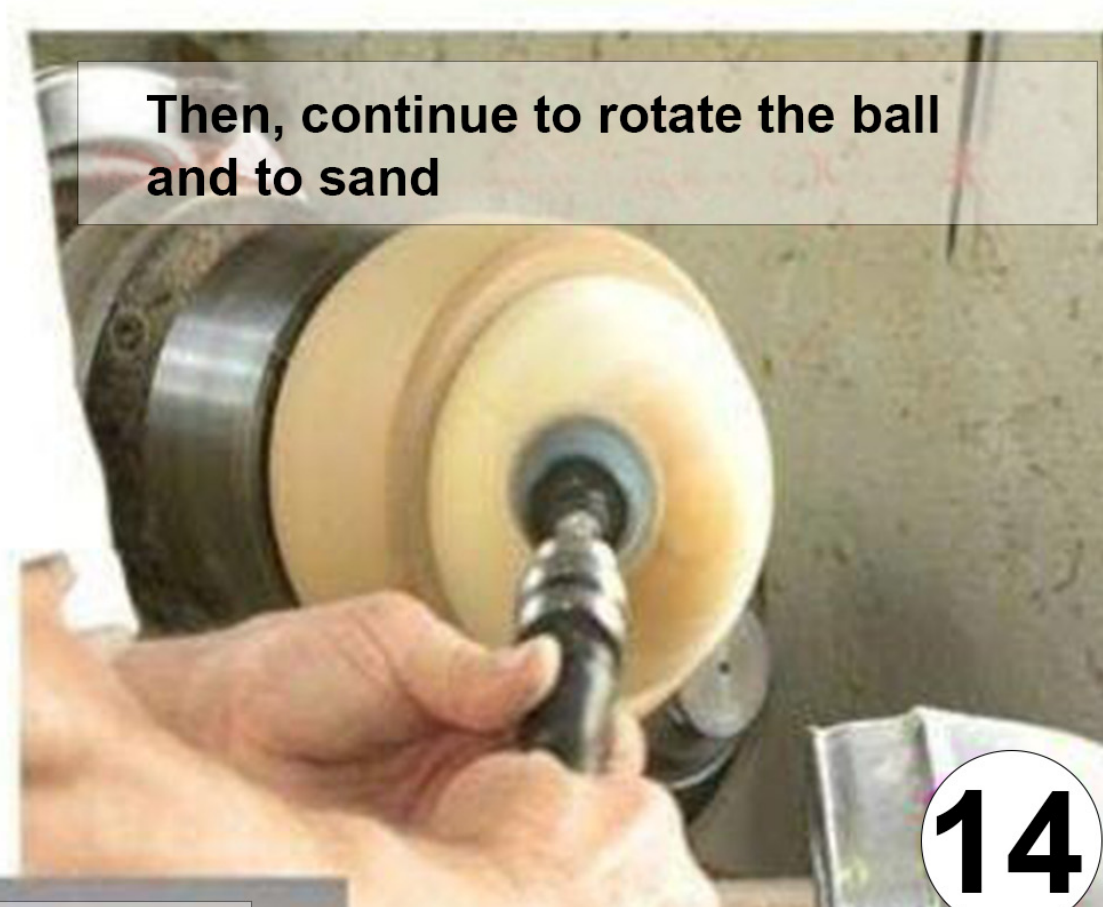

12

Turn the other side (except the line) and begin to sand

13

Then, continue to rotate the ball and to sand

14

Ok, it's done. Great job!
