19:00:44 From Bob Grinstead - Mansfield, Texas to Everyone:
I agree not enough detail on different turnings. They just want to show you their art, not how they did it.

19:02:25 From Dane Chandler -Tucson AZ to Everyone:
Indeed Billy. More carving pieces & pieces made off the lathe & then put together. Then pages of advertising. Very disappointed at what there.

19:16:52 From Dane Chandler -Tucson AZ to Everyone:

I use stop collars on all my tool rests.....

19:22:53 From Matt Harber to Everyone:

So, I guess the answer to my question is that the boring bar does indeed have a flat spot on it. The reason I asked this, is that I was curious as to how the system captured the bar, and kept it from catching inside the piece.

19:23:25 From Tim Hatch Bastrop, TX to Everyone:

Looks like it to me Matt

19:23:43 From Dane Chandler -Tucson AZ to Everyone:

Yes, he showed the bar, flat on one side, oval on the other. Interesting combo

19:24:49 From Matt Harber to Everyone:

Might have too many RPMs for the forstner bit.... one of the tricks I use is to smear some beeswax on the bit, makes it go in and out smoother....

19:24:59 From Captain Eddie to Everyone:

19:39:30 From brenda to Everyone:

my ipad went almost dead. and the screen was locked up. so I had to come inside

19:40:21 From Bob Grinstead - Mansfield, Texas to Everyone:

Just hoggin it out don't think it matters much here

19:41:31 From Terry's iPad to Everyone:
What is grain orientation

19:41:45 From Doug Miller in Kentucky to Everyone:
Yes Jim

19:41:59 From Billy Burt (Alamo City) to Everyone:
That air hose just scared the crap out of me... wasn't expecting it... lol

19:42:03 From Tim Hatch Bastrop, TX to Everyone:
Palo Verde Explains the dust...

19:42:13 From Andy S.-Harrisville pa to Everyone:
looks sidegrain

19:43:03 From Dane Chandler -Tucson AZ to Everyone:
Yep Tim. You should see the dust with a 20yr old piece of Chilean Mesquite

19:43:15 From brenda to Everyone:
did he put a tenon or mortus on that?

19:43:45 From Terry's iPad to Everyone:
Sidegrain thank you

19:43:52 From Doug Miller in Kentucky to Everyone:
I believe it's a tenon Brenda

19:43:54 From Dane Chandler -Tucson AZ to Everyone:
Didn't show that.....but would assume tenon

19:44:28 From Billy Burt (Alamo City) to Everyone:
You wanna see dust? I have some 120 yr old wormy American chestnut! You get nothing but dust!

19:44:31 From Tim Hatch Bastrop, TX to Everyone:
LOL I bet... Palo Verde is not the most pleasant smelling wood to turn.. Remember cutting
a bunch in the old days with my dad.. always wondered what it would look like turned...

19:47:25 From Dane Chandler -Tucson AZ to Everyone:

19:51:41 From Brent Sobotka to Everyone:
Could you turn the tool over?

19:52:02 From Dane Chandler -Tucson AZ to Everyone:
No

19:53:18 From Matt Harber to Everyone:
I've not seen this system in action before, so this is very informative.

19:56:23 From Tim Hatch Bastrop, TX to Everyone:
Brent the design of the tool as I understand it is flat on the bottom round on top so he would not have any stability on the round side

19:56:43 From Tim Hatch Bastrop, TX to Everyone:
if it was on the bottom

19:57:30 From Gary Bobenhausen-Corinth, Texas to Everyone:
Well you have people like me who have never used a system like this and I am trying hard to understand what to do.

19:57:49 From Matt Harber to Everyone:
You need the flat side of the bar on the bottom of the capture section, so that the torque of the piece turning doesn't catch the tool.

19:58:54 From Kade Bolger, Woodturner to Everyone:
Good evening, everyone! Cheers.

19:59:02 From Tim Hatch Bastrop, TX to Everyone:
Evening Kade

19:59:16 From Matt Harber to Everyone:
I've got an example piece I can show, to demonstrate what I meant, how I do it.....

19:59:17 From Gary Bobenhausen-Corinth, Texas to Everyone:
Hi there Kade.

19:59:19 From scott tague wisconsin to Everyone:
Hey Kade

19:59:19 From Huck to Everyone:
HI KADE

19:59:20 From Bob Grinstead - Mansfield, Texas to Everyone:
looks like the back tool rest in turned around to me. the 2 bars should be at the back to keep the tool from dipping? or in the front to keep the bar from going up?

19:59:27 From Matt Harber to Everyone:
Hi Kade!

19:59:28 From Andy S.-Harrisville pa to Everyone:
Hey there Kade

19:59:31 From Doug Miller in Kentucky to Everyone:
Easy to see, even though this is a small cutter on the tool it removes a lot of wood quickly.

19:59:32 From Bob Moffett to Everyone:
Good Evening Kade

19:59:36 From Safety Sue Largo to Everyone:
Hi Kade

20:00:02 From Billy Burt (Alamo City) to Everyone:
There is a diagram about half way down this page that shows what Matt was talking about:

<https://www.woodmagazine.com/woodworking-how-to/woodworking-scrolling-carving/peek-into-hollow-turning>

20:00:11 From Matt Harber to Everyone:

The section in the banjo is the capture section. It keeps the tool and bar from turning due to torque, and tearing up the piece.

20:01:01 From Matt Harber to Everyone:

Exactly, Billy, thank you! And you work downward from the top of the piece, towards the headstock.

20:01:18 From Bob Grinstead - Mansfield, Texas to Everyone:

so the purpose is to keep the bar from turning not keeping it straight

20:01:45 From Matt Harber to Everyone:

Correct, Bob. That's why the bar has a flat side, on the bottom.

20:02:09 From Billy Burt (Alamo City) to Everyone:

There is another here: <https://www.rockler.com/learn/tools-to-use-hollow-vessels>

20:02:32 From Bob Grinstead - Mansfield, Texas to Everyone:

do you always use it with the front tool rest

20:02:35 From Doug Miller in Kentucky to Everyone:

From twisting. The system keeps the bar from twisting the cutter out of position.

20:02:55 From Andy S.-Harrisville pa to Everyone:

yes, like the other type of hollowing with the outrigger welded to the boring bar. it keeps the torque of the turning from ripping the tool out of your hands or a nasty catch

20:03:29 From Matt Harber to Everyone:

Reacted to "From twisting. The s..." with ☐ ☐

20:04:53 From Bob Grinstead - Mansfield, Texas to Everyone:

20:05:49 From Doug Miller in Kentucky to Everyone:

Same idea Bob. Flat bottom to keep the tool from twisting.

20:06:14 From Matt Harber to Everyone:

Some of the various hollowing systems work differently. For instance, my own hollowing system is similar to the Lyle Jamieson one, and you use your normal tool rest for the bar, but the capture system has it's own post.... still in the back.

20:06:50 From Matt Harber to Everyone:

... which is why I asked if you could switch the two...

20:11:29 From Robert Hodge - Houston,TX to Everyone:

If you would of danced a little bit more in the beginning you should have a couple dollar bills atleast
