I'm not brave enough to turn away loose rings like that, so I use hot-melt glue to fasten 3 or 4 pieces of scrap (1/4" lath works well) in a spoke-like configuration on the head-stock side of the board. Turn carefully so as not to cut through the lath and the rings will be secure. Soften the glue with a heat gun to remove the lath strips.

You should also make sure to flatten the sides of the parting tool. Thus will prevent it from binding up (regardless if used for this or regular parting tasks).

My challenge would be centering the piece on the lathe for this stage.

17:52:50 From casey to Everyone:

I am turning a wet and thin plate. Not enough room for a tenon or mortise. Can I use CA glue to safely attach a waste block - even though the wood is wet?

17:54:47 From Doug Miller to Everyone:

Maybe. If the wood isn't sopping wet it should be ok. Understand that the moisture in the wood is going to set the glue off quickly so make the joint correctly the first time.

17:55:02 From Doug Miller to Everyone:

You'd be safer with wood glue though

17:55:47 From Billy Burt (Alamo City) to Everyone:

Or polyurethane glue like Gorilla glue that requires moisture to cure
