From Matt the Gobleteer : Some oaks will interact with the steel and iron, too.... discoloring the oak and messing with the metal.

From Joaquin Juatai - Thomasville, NC : Jim Duxbury gave me some river birch that was so wet it was dripping - I cut it down, sealed the blanks, and immediately hit the power switch on my shop vac.

From Tim Hatch Bastrop, TX : Matt that is exactly the wood that I left on the Band Saw...LOL

From Victor Todd, Mills River, NC :

18:11:28 From Tim Hatch Bastrop, TX : This would be a great project for one of those Elbo Tools or a Trent Bosch Stabilizer....or even a homemade rig.. to relieve the torque..

From Dane Chandler : swan neck for the win by the neck. the rest is easy peasy

From Tim Hatch Bastrop, TX : With my wrist injury too much torque... that is why I have the hollowing tools..

From Dane Chandler : indeed

From Scott Medori : I can, and have, moved my headstock down, so I can turn from the end

From Tim Hatch Bastrop, TX : Captain Eddie said if " your lathe doesn't turn in Reverse"... "Get Over It... Get on the other side and turn"

18:17:13 From Victor Todd, Mills River, NC : Oopsie

18:18:31 From Paul Lajoie : That's why you should use a grub screw, so Chuck doesn't twist off spindle

Reactions:

18:19:18 From Scott Medori : One could do this project as an inside out, like a Christmas ornament

From Matt the Gobleteer : Yep, you could.

18:20:19 From safety Sue : Was the set screw used on the chuck? It had been spinning in reverse for a while

18:22:20 From Billy B, Alamo City : Oh, bummer, I missed it. What happened?
